

Github

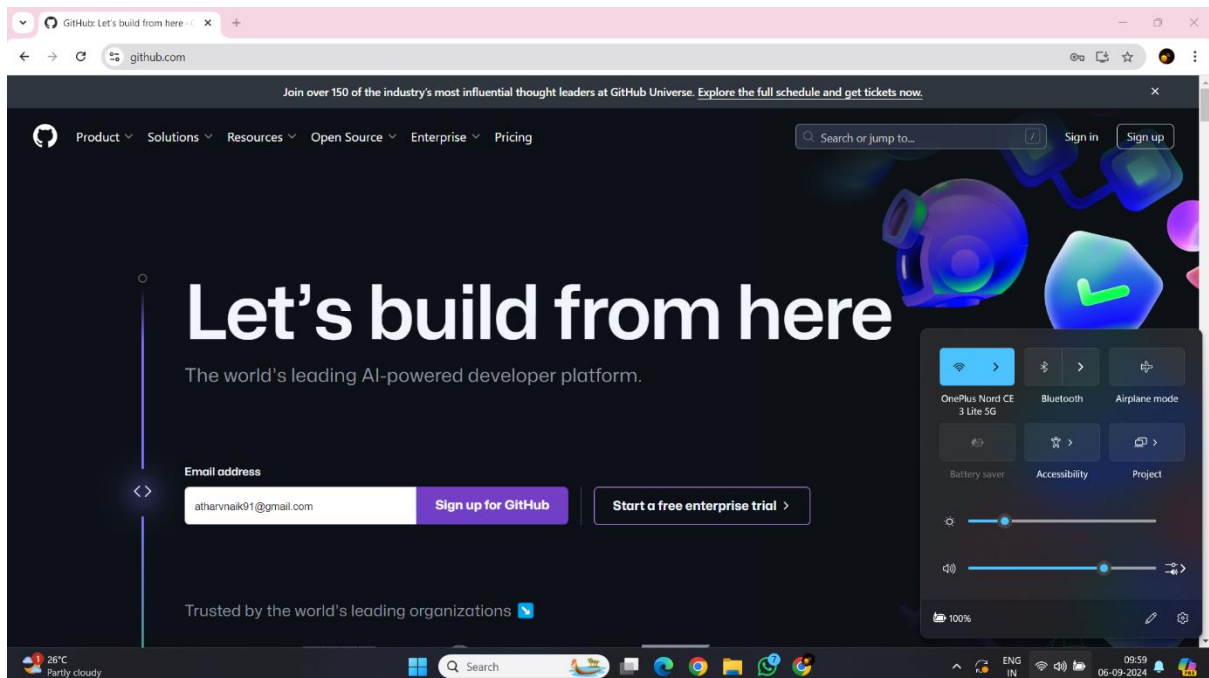

Step 1 : Go to google chrome.

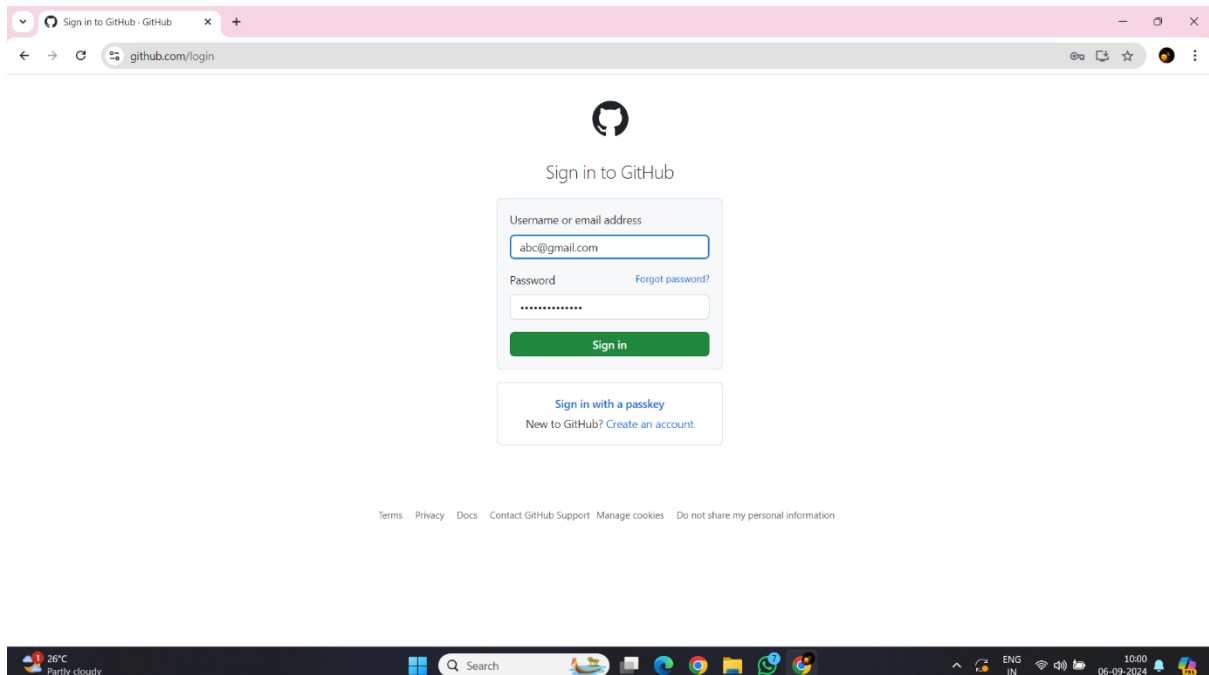

Step 2 : Search 'github.com' on Browser.

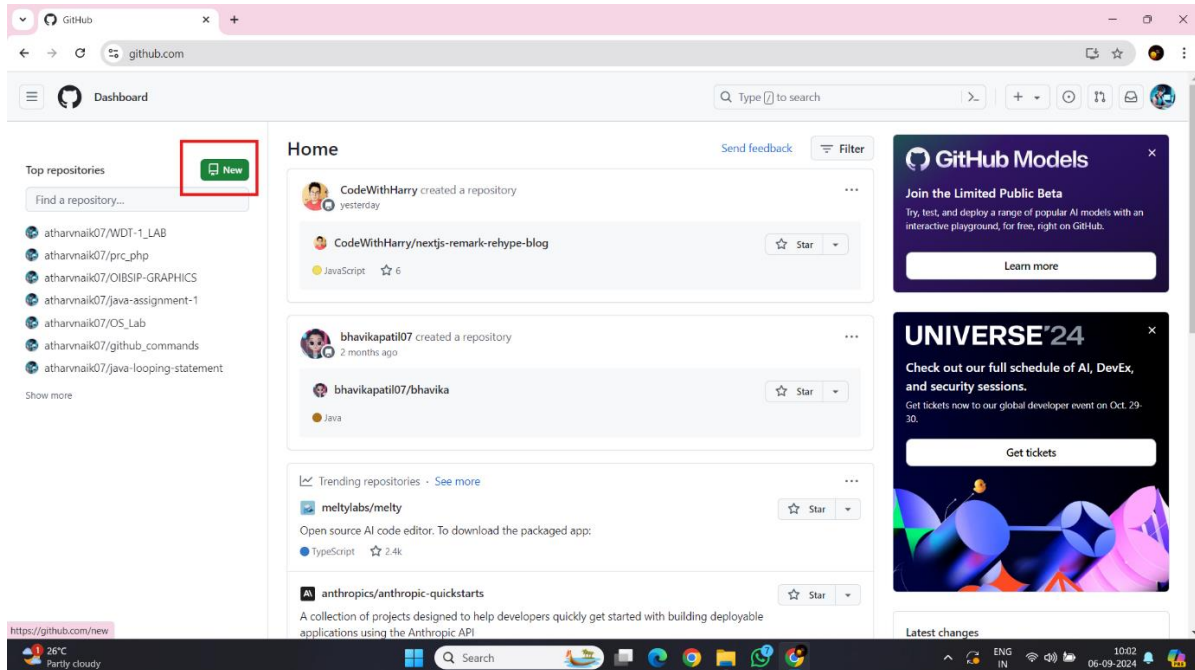

Step 3 : Click on 'Sign in'.

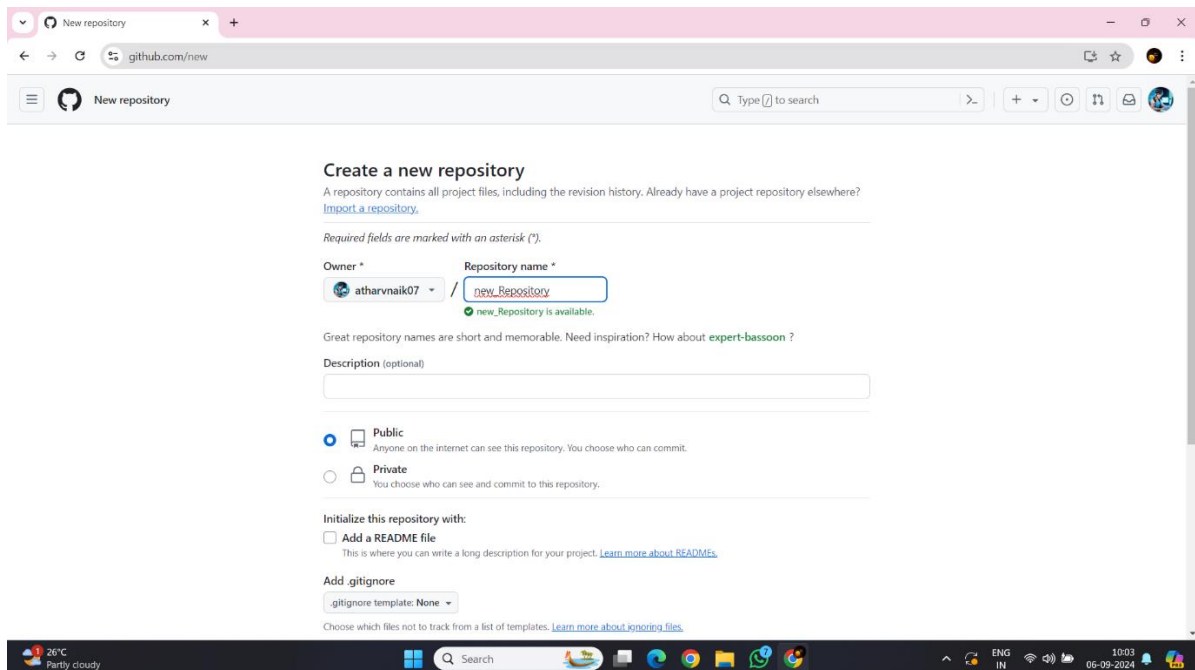

Step 4 : you can Create account with the option 'create an account'. Also when you already have an account Simply enter the password and email or username and log in to the account.

Step 5 : click on 'new' button.

Step 6 : create a new repository.

Step 7 : click on 'create repository' button.

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner *  atharvnaik07 / Repository name *

new_Repository is available.

Great repository names are short and memorable. Need inspiration? How about [expert-bassoon](#) ?

Description (optional)

☒ **Public**
Anyone on the Internet can see this repository. You choose who can commit.

☐ **Private**
You choose who can see and commit to this repository.

Initialize this repository with:

☐ **Add a README file**
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore
.gitignore template: **None**

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

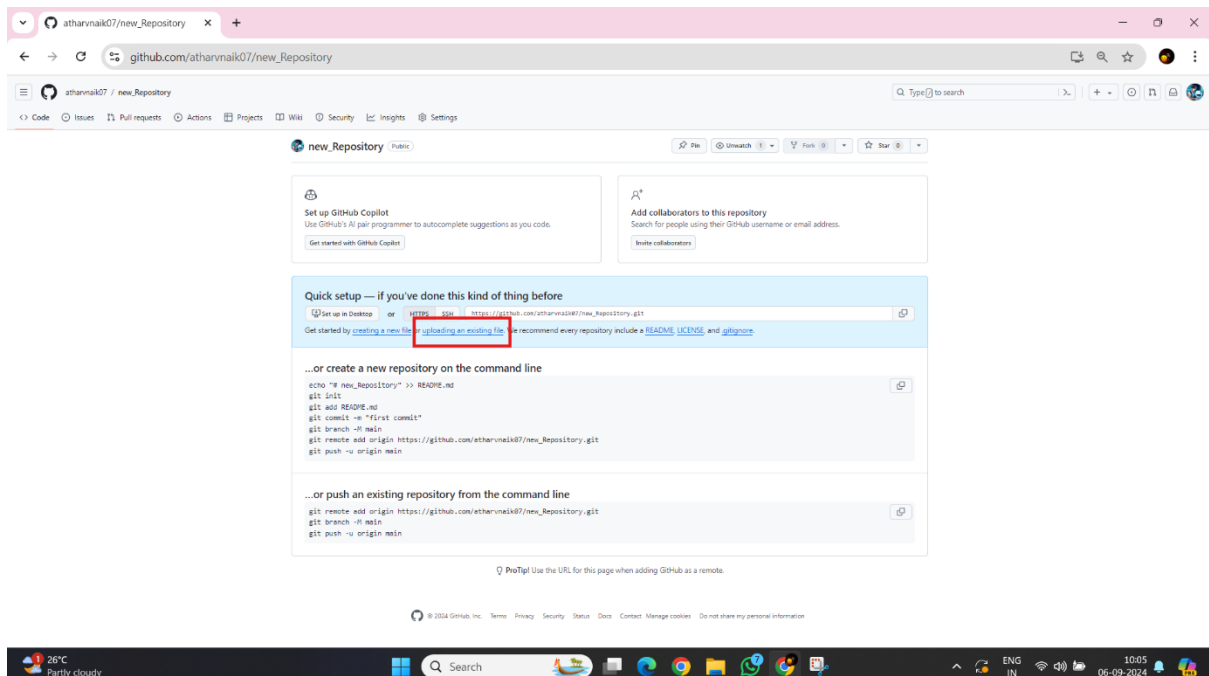

Choose a license
License: **None**

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

📌 You are creating a public repository in your personal account.

Create repository

Step 8 : click on 'uploading an existing file' option (hyperlink button).

The screenshot shows the GitHub repository page for 'new_Repository' (Public). The 'Quick setup' section is visible, which provides instructions for setting up the repository. The 'uploading an existing file' option is highlighted with a red box. Below this, there are instructions for creating a new repository on the command line and pushing an existing repository from the command line. The page also includes links for setting up GitHub Copilot, adding collaborators, and a footer with GitHub's terms and privacy policy.

Quick setup — if you've done this kind of thing before

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# new_Repository" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/atharvnaik07/new_Repository.git
git push -u origin main
```

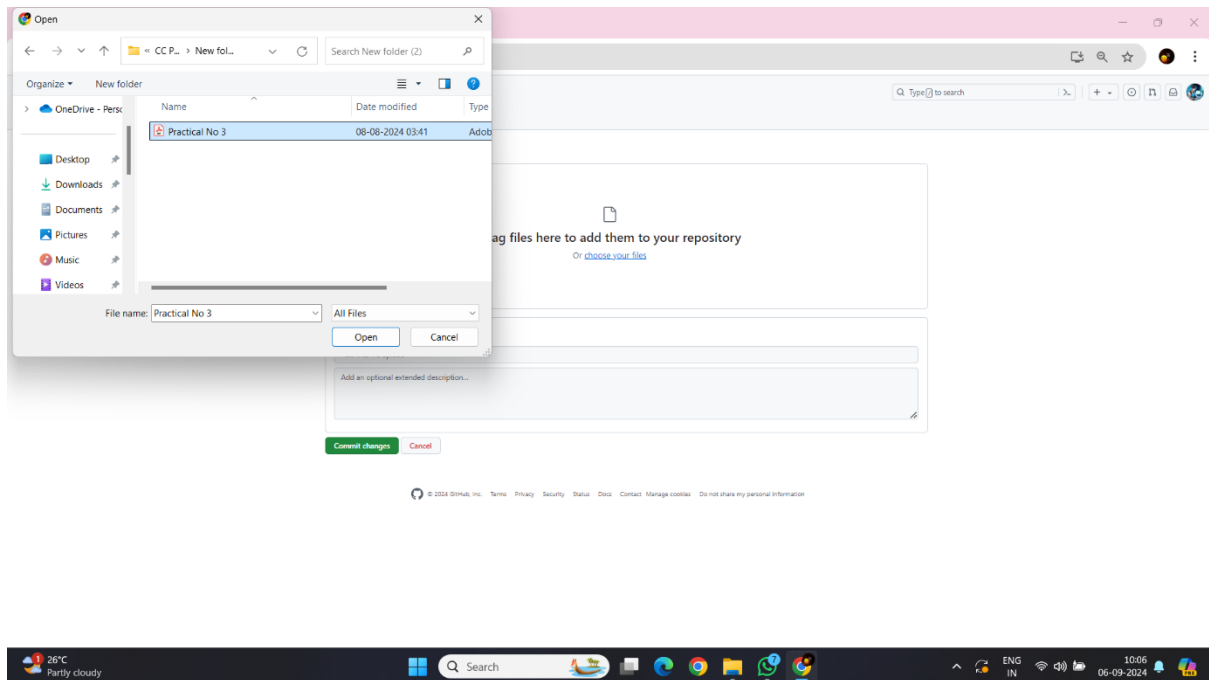

...or push an existing repository from the command line

```
git remote add origin https://github.com/atharvnaik07/new_Repository.git
git branch -M main
git push -u origin main
```

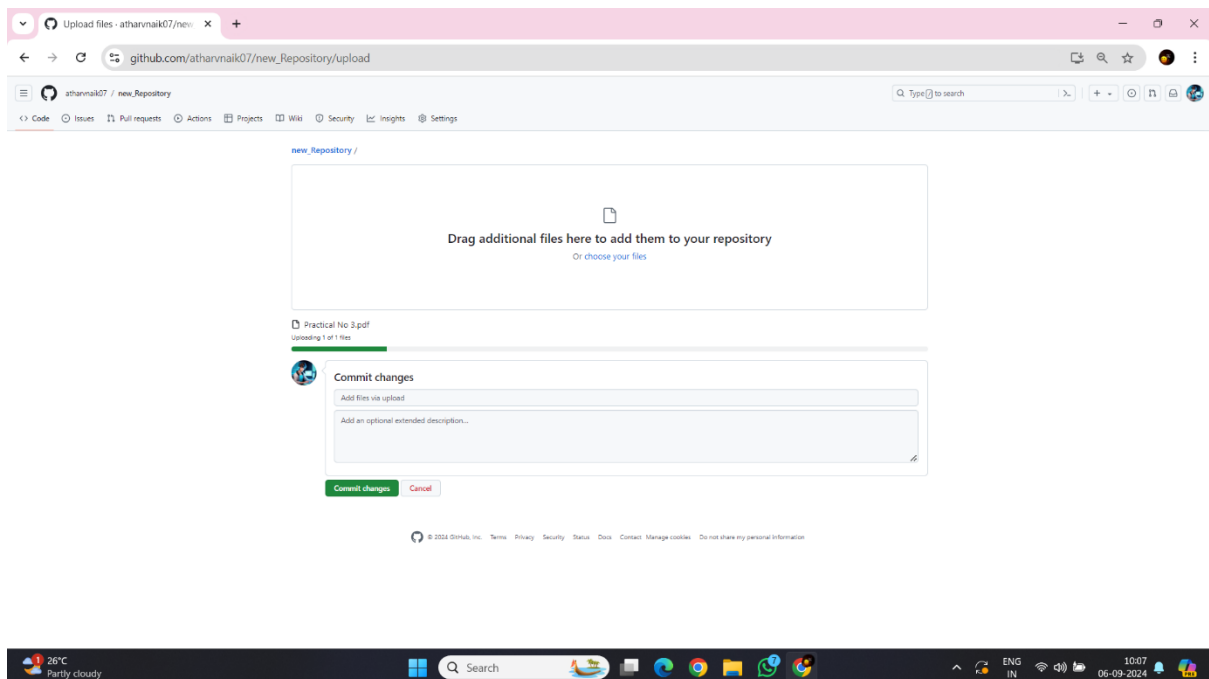

ProTip! Use the URL for this page when adding GitHub as a remote.
